Exploring Weather Trends

Author: Felipe Millacura

Your submission should be a PDF that includes:

```
An outline of steps taken to prepare the data to be visualized in the chart, such as:
    What tools did you use for each step? (Python, SQL, Excel, etc)
    How did you calculate the moving average?
    What were your key considerations when deciding how to visualize the trends?
Line chart with local and global temperature trends
At least four observations about the similarities and/or differences in the trends
```

Extracting the SQL Data

In order to extract global data

```
SELECT *
FROM global_data
In order to extract city data from Edinburgh, London, Santiago and California

SELECT year, avg_temp, city, country
FROM city_data
WHERE country = 'United Kingdom'
OR country = 'Chile'
OR country = 'Japan'
OR country = 'Australia'
OR country = 'South Africa'
```

Analysing in Python

```
import pandas as pd
import matplotlib.pyplot as plt

In [40]:

# Imports data

global_data = pd.read_csv('./global_data.csv')

cities_data = pd.read_csv('./five_countries.csv')

#Calculates rolling windows

global_data['MA7'] = global_data['avg_temp'].rolling(7, min_periods=7).mean()

global_data['MA14'] = global_data['avg_temp'].rolling(14, min_periods=14).mean()

global_data.set index('year')
```

```
Out[87]:
     avg_temp

Observations about the similarities and differences between the world averages and your city's averages, as well as overall trends. Here are some questions to get you started.

Is your city hotter or cooler on average compared to the global average? Has the difference been consistent over time?

Santiago is the city showing the lowest temperature of all, fluctuating below the 10 degrees Celsius

How do the changes in your city's temperatures over time compare to the changes in the global average?

Global temperature fluctuates aroind 8 and 9 degrees, but Santiago is still below that range showing values of up to 2 degrees lower

What does the overall trend look like? Is the world getting hotter or cooler?

From this analysis we can clearly observe that global temperature is going up, and that on each country an uptrend can be seen

What is the hottest city?

From all five countries analysed the hottest city is present in South Africa, and corresponds to Durban

What are the second best?

The second coolest city is Edinburgh in United Kingdom and the second hotest is Brisbane, Australia

In general there is no major differences between MA7 and MA14 analysis
